

Configure Hue to Store Data in MySQL or MariaDB

1. Configure the database connection parameters in the `[desktop][[database]]` section of `hue.ini`. Set the following properties with your database connection parameters:

```
[desktop]
...
[[database]]
engine=mysql
host=<host>
port=3306
user=<user>
password=<password>
name=<database>
```

Example of configuration:

```
[desktop]
...
[[database]]
engine=mysql
host=node1
port=3306
user=hue
password=hue_password
name=hue
```

2. Perform the initial data migration:

```
cd /opt/mapr/hue/hue-<version>
source ./build/env/bin/activate
hue syncdb --noinput
hue migrate
deactivate
```

3. Restart Hue:

```
maprcli node services -name hue -action restart -nodes <node_with_hue>
```
