Checking the Status of Oozie

Once Oozie is installed, you can check the status using the command line or the Oozie web console. The `<oozie_port_number>`
(../AdvancedInstallation/InstallOozie.html#InstallOozie__step_djg_dp4_qbb) noted in the URLs depend on whether your cluster is secure.

Check Status from Command Line

Use the `oozie admin` command:

```
/opt/mapr/oozie/oozie-<version>/bin/oozie admin -oozie http://<oozie_node>:<oozie_port_number>/oozie -status
```

The following output indicates normal operation:

```
System mode: NORMAL
```

Check Status from the Oozie Web Console

Point your browser to `http://<oozie_node>:<oozie_port_number>/oozie`
