Add CA cert to local trust store on CentOS or Debian

⟨⟩ **add CA cert on CentOS.md**

- Open a webpage that uses the CA with Firefox
- Click the lock-icon in the addressbar -> show information -> show certificate
- the certificate viewer will open
- click details and choose the certificate of the certificate-chain, you want to import to CentOS
- click "Export..." and save it as .crt file
- Copy the .crt file to `/etc/pki/ca-trust/source/anchors` on your CentOS machine
- run `update-ca-trust extract`
- test it with `wget https://thewebsite.org`

On debian the directory is `/usr/local/share/ca-certificates/` and the command to update is `update-ca-certificates`
