Configure the OJAI Distributed Query Service

Use these steps to install and configure the OJAI Distributed Query Service (../MapR-DB/ArchitectureOJAIQueryService.html#concept_pc2_4ws_p1b):

1. Using the MEP 4.0 or later repository, install Drill to run under Warden on all data nodes. See Install Drill to Run Under Warden (install_drill_warden.html#InstallingApacheDrillonMa_27689700-d3e67).

2. Configure the query service by running the following configure.sh script command on the Drill nodes:

   ```
   /opt/mapr/server/configure.sh -R -QS
   ```

3. Register the query service:

   📄 **Note:** In the following command `<clustername>` is the name of the cluster as specified in `/opt/mapr/conf/mapr-clusters.conf` .

   ```
   maprcli cluster queryservice setconfig -enabled true -clusterid <clustername>-drillbits -storageplugin dfs -znode /drill
   ```
